What is a Smoot?

- An imprecise unit of measurement originating from famous MIT hack
- 1 smoot = 5 feet and 7 inches
- Harvard bridge = 364.4 smoots (+ an ear)

The HACK:

The HACK:

- Tom O'Connor - wanted to measure Harvard bridge to track his progress when walking

The HACK:

- Tom O'Connor - wanted to measure Harvard bridge to track his progress when walking
- Smoot's height chosen as unit of measurement (he was the shortest)

The HACK:

- Tom O'Connor - wanted to measure Harvard bridge to track his progress when walking
- Smoot's height chosen as unit of measurement (he was the shortest)
- Seven freshman measured Harvard bridge using Smoot's body to mark distance

The HACK:

- Tom O'Connor - wanted to measure Harvard bridge to track his progress when walking
- Smoot's height chosen as unit of measurement (he was the shortest)
- Seven freshman measured Harvard bridge using Smoot's body to mark distance
- Result: Harvard Bridge = 364.4 smoots (+an ear)

- Chairman of the American National Standards Institute

- Chairman of the American National Standards Institute
- Served as president of the International Organization for Standardization from 2003 to 2005.
